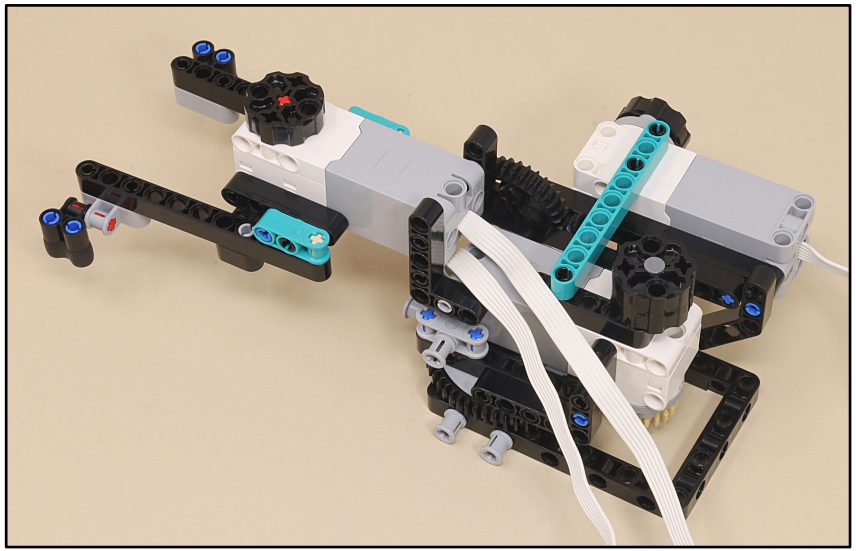
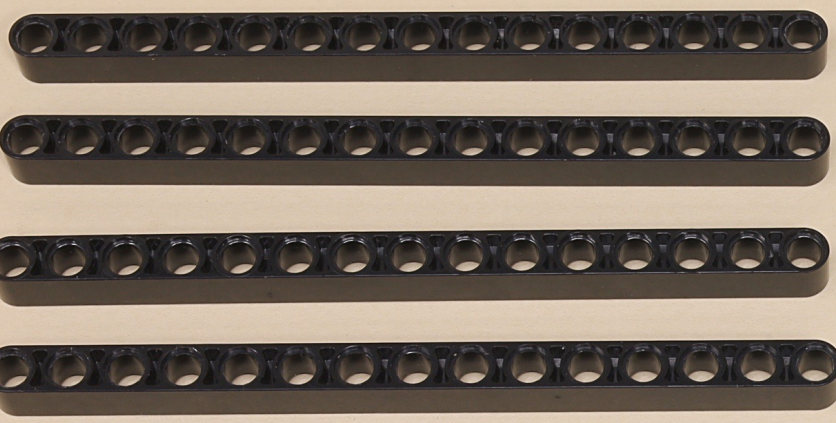
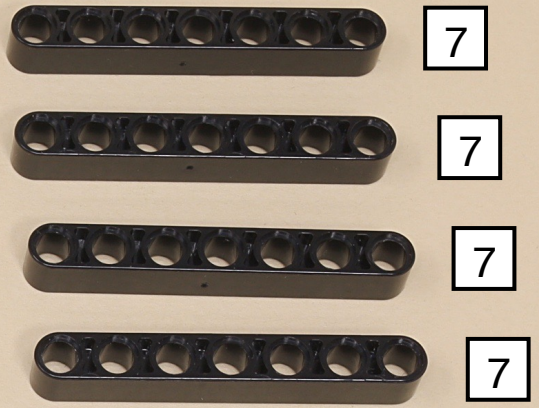
First, build the:

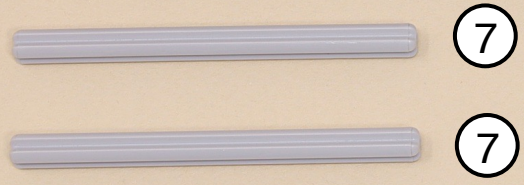


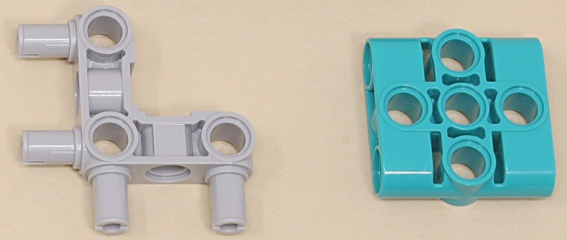
Arm for Ring Stacker

…then continue here to make the complete Ring Stacker

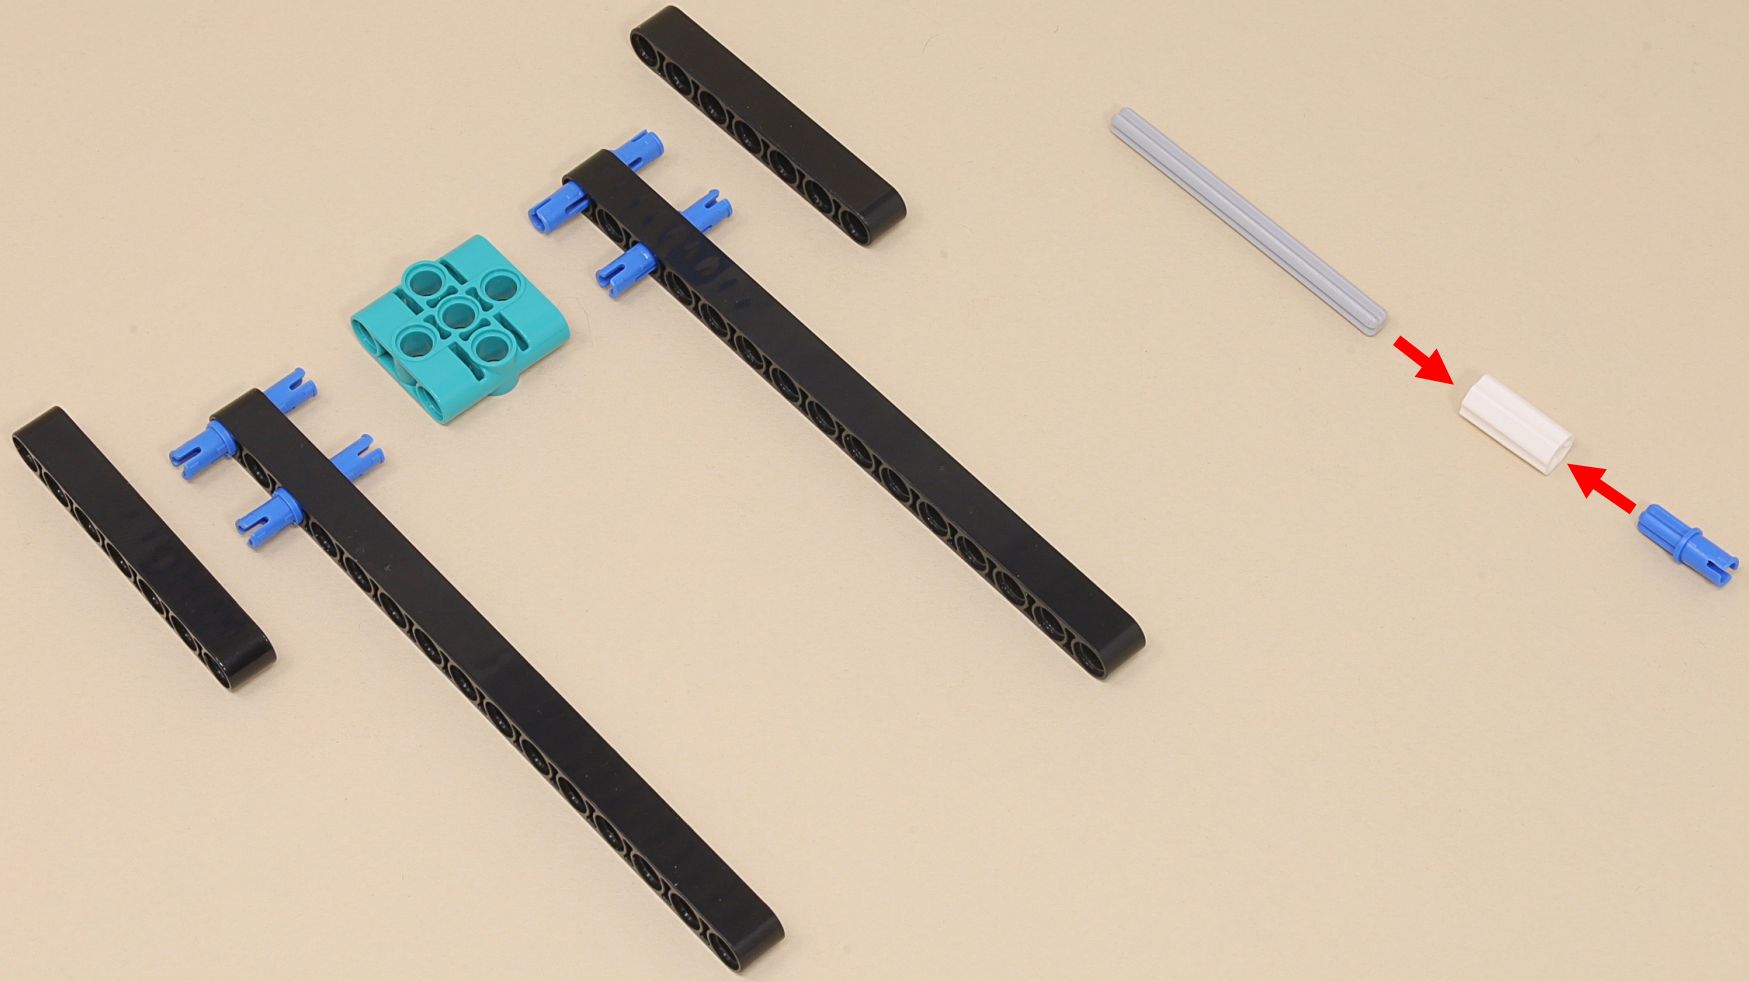








(8 x)



2 x

Make two of these

Straighten and shape the wires so that they stay up high out of the way of the arm as it moves.

If you still have trouble with wires catching on the turntable knob, you can remove the knob before running the program.

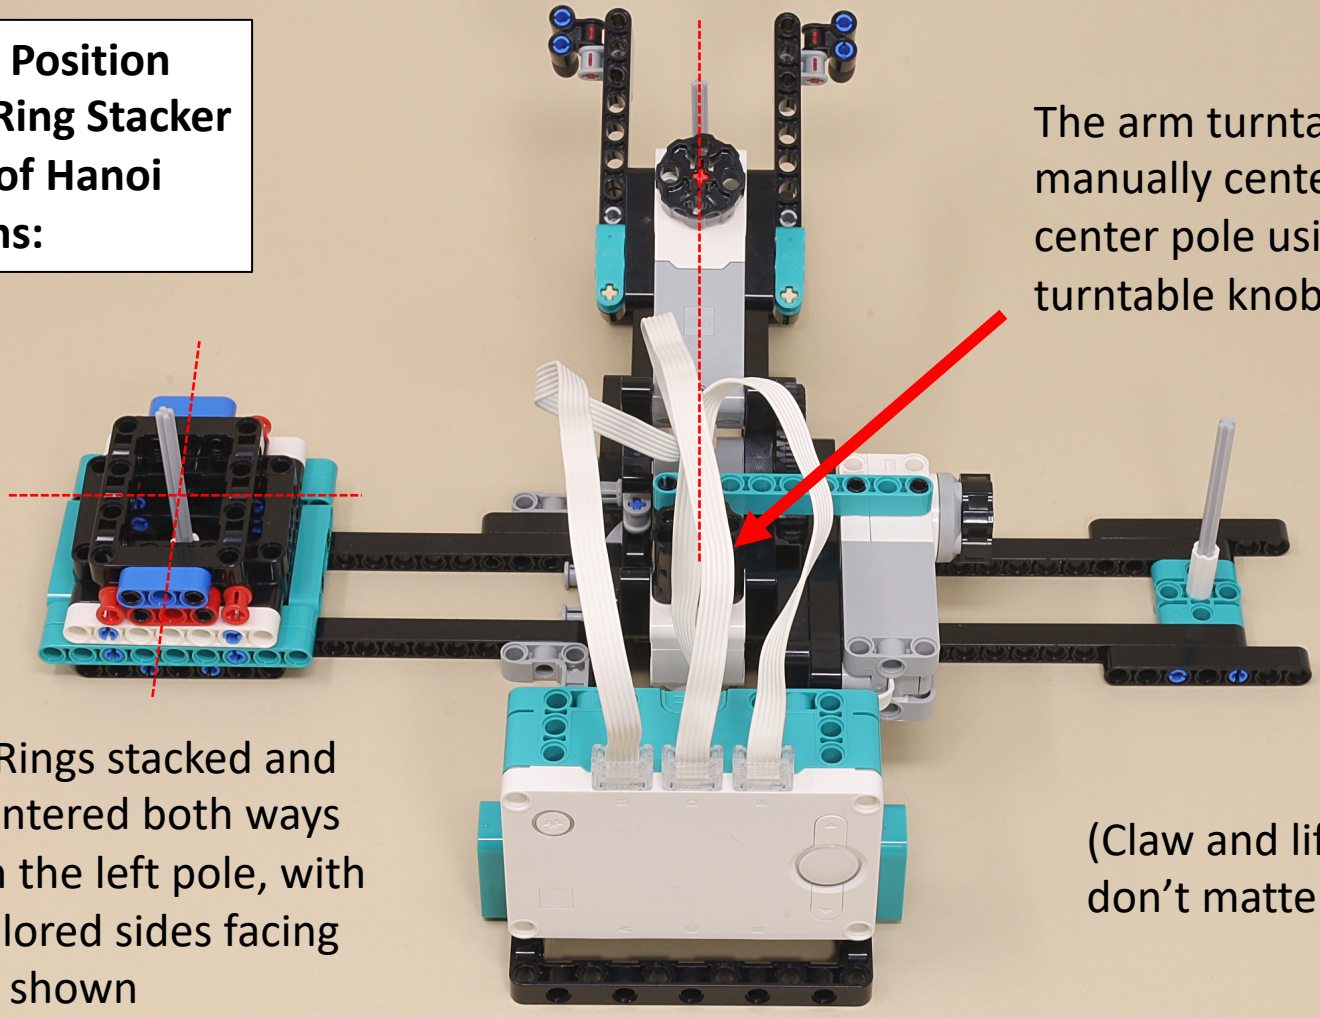
Starting Position for the Ring Stacker Towers of Hanoi programs:



The arm turntable must be manually centered on the center pole using the turntable knob.

4 Rings stacked and centered both ways on the left pole, with colored sides facing as shown

(Claw and lift positions don’t matter)
